STRUCTURES 

You can order the liquid level indicator either as a full travel or half travel; all fittings and brackets required for installation are supplied.

All gauge boards are constructed of 14 gauge galvanized steel. The weather resistant vinyl facing with large, black numerals and intermediate measures can easily be read from a distance.

A half-travel direct reading gauge board is also available upon request with a 2:1 compressed scale, which limits travel to the top half of the tank and keeps the level indicator out of the reach of vandals.
